Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention.

Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

**Title of Invention:** Online Trading System

**Inventors** (please provide full names): Akira Wakabayashi

**Earliest Priority Filing Date:** Japan 2000-233266 08/01/2000

\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

4-21-04 202:42

**Attachments:** Abstract, Bib sheet, Claims and Specification

**Examiner's Summary of the invention:**

An online trading system wherein the item to be sold is shown to the public online for a predetermined time period during which time the public can place pre-auction bids for the item, (called a prior bid in this case) the pre-auction bids being stored by the system. Then at the end of the predetermined time period the item is auctioned at an online auction site and auction bids are stored. Finally, the highest priced auction bid and the highest priced pre-auction bid are compared and the item is sold at the higher priced bid (see claim 4). In claims 5 and 10, a price adjustment factor is added if the item is to be sold to a pre-auction bid, the price adjustment factor being added to the highest price auction bid to determine the successful bid price. In claims 6 and 11, if there are pre-auction bids but there are no bids at the auction, a price adjustment factor is added to the starting price of the auction to determine the successful bid price. Note that the claimed embodiments are described as the <Second Embodiment> starting on page 12 of the Specification.

Language: English Document Type: Journal Paper (JP)

Treatment: Practical (P); Theoretical (T)

**Abstract:** In a variety of applications, especially in large scale dynamic systems, the mechanization of different vibration control elements in different locations would be decided by limitations placed on the modal vibration of the system and the inherent dynamic coupling between its modes. Also, the quality of vibration control to the economy of producing the whole system would be another **trade** -off leading to a mix of passive, active and semi-active vibration control elements in one system. This term active is limited to externally powered vibration control inputs and the term semi-active is limited to rapidly switched dampers. In this **article** , an optimal **preview** control method is developed for application to dynamic systems having active and semi-active vibration control elements mechanized at different locations in one system. The system is then a piecewise (bilinear) controller in which two independent sets of control inputs appear additively and multiplicatively. Calculus of variations along with the Hamiltonian approach are employed for the derivation of this method. In essence, it requires the active elements to be ideal force generators and the switched dampers to have the property of on-line variation of the damping characteristics to **pre - determined** limits. As the dampers switch during operation the whole system's structure differs, and then values of the active forcing inputs are adapted to match these rapid changes. Strictly speaking, each rapidly switched damper has pre-known upper and lower damping levels and it can take on any in-between value. This in-between value is to be determined by the method as long as the damper tracks a pre-known fully active control demand. In every damping state of each semi-active damper the method provides the optimal matching values of the active forcing inputs. The method is shown to have the feature of solving simple standard matrix equations to obtain closed form solutions. A comprehensive 9-DOF tractor semi-trailer model is used to demonstrate the effectiveness of the method. Time domain predictions are made to compare performance of ride and tyre-to-road contact in the model for the presented method with those of some other active and semi-active suspension designs.

**OPTIMAL CONTROL OF SEMI-ACTIVE AUTOMOBILE SUSPENSION INCLUDING PREVIEW INFORMATION**

Author: YOUN, ILJOONG  
Degree: PH.D.  
Year: 1992  
Corporate Source/Institution: STATE UNIVERSITY OF NEW YORK AT STONY BROOK (0771)  
Adviser: ALEKSANDER HAC  
Source: VOLUME 54/03-B OF DISSERTATION ABSTRACTS INTERNATIONAL.  
PAGE 1516. 194 PAGES  
Descriptors: ENGINEERING, AUTOMOTIVE; ENGINEERING, MECHANICAL  
Descriptor Codes: 0540; 0548

In this dissertation synthesis of controllers for semi-active vehicle suspension systems is presented using an approach based on optimal control theory. For the purpose of this investigation, a vehicle is modeled as a system consisting of rigid bodies representing the body structure and the wheels with linear springs, and semi-active dampers that can vary the rate of energy dissipation across the suspension. Since the damping ratios of the semi-active dampers are control variables, the system is described by bilinear state equations involving products of the state vector and the control inputs. Using optimal control theory, the suspension system is optimized with respect to the performance index that **trades** off a measure of ride quality against an index of road holding while preserving constraints on suspension rattle space and on the amount of damping available in the control system. Particular emphasis is placed on the optimal use of preview information about the road/terrain input in front of the vehicle. Such information can be obtained either from sonar sensors located in front of vehicle or by monitoring the motion of the front wheels and using this information to control rear suspension. Additional aspects of design of suspension controls, such as addition of integral action to eliminate suspension deflection offset on sloping road, improved attitude control by reducing roll, dive or squat in transient maneuvers and body lean due to aerodynamic forces, are also considered. The theory developed here is presented for both continuous-time and discrete-time formulations to facilitate digital implementation. The results of numerical simulations for 2-degree-of-freedom and 4-degree-of-freedom vehicle models are presented showing potential for substantial improvement of performance over existing designs. Potential benefits brought about by having springs with variable stiffness (as is the case with some air spring designs), are also evaluated.

ABSTRACT: A **preview** of the Convergence **automotive** electronics convention, which will be held on October 19-21, 1998, in the Hyatt Regency Hotel's Fairlane Center, Dearborn, Michigan. The main theme of the event will be vehicle infotronics, a term coined to define the study and implementation of technologies capable of real-time monitoring of outside sources of information, such as the Internet, for in-vehicle use. A review of selected products that will be on display is also provided.

ABSTRACT: Two upcoming expositions are **previewed**. The Society of **Automotive** Engineers International Off-Highway and Powerplant Congress and Exposition will be held on September 13-15, 1993, in Milwaukee, Wisconsin. In addition to the exhibition, there will be conferences and seminars on topics ranging from fluid power to diesel engines. The 1993 International Construction & Utility Equipment Exposition will be held on September 21-23, at the Kentucky Fair & Exposition Center in Louisville, Kentucky. A sample of the fluid power products and components that will be on display at these events is described. .

Detailed Description

English Abstract

A method and apparatus for information presentation and management in an  
online trading environment are provided. According to one aspect of  
the present invention, person-to-person commerce over the Internet is  
facilitated by providing prospective buyers the ability to quickly  
preview items for sale. Images are harvested (455) from a plurality of  
sites based upon user-supplied...

...According to another aspect of the present invention, a user may submit  
a query to preview items for sale. After receiving the query,

thumbnail images corresponding to items that satisfy the user...

Detailed Description

... user interface for online commerce sites. In particular, it would be advantageous to enhance the **online trading** experience by providing buyers with a mechanism to more quickly **preview items** for sale. Additionally, the trading experience of sellers may be improved by automating certain aspects...

...SUMMARY OF THE INVENTION

A method and apparatus for information presentation and management in an **online trading** environment are described. According to one aspect of the present invention, person-to-person commerce over the Internet is facilitated by providing prospective buyers the ability to quickly **preview items** for sale. Images are harvested from a plurality of sites based upon user-supplied information...

...SPECIFICATION according to the system taught in USP 4,789,928, in order to display the **article** to be sold or **previewed**, whether or not the desired used car is being offered for **auction**, a laser disk storing the necessary **auction** data, such as the **auction** starting time, name, external appearance, year, model, evaluation and distance traveled of the automobiles toto each dealer terminal by the day before the start of the **auction**. For this reason, it is virtually impossible to hold the **auction** more than once a week.

Further, since the laser disk with the preview information must... exhibited by the day before the start of the auction in order to display the **article** to be sold or **preview** whether or not the desired used car is being offered for **auction**. Instead, merely one laser disk for the host computer is necessary. Therefore, the **auction** can be held if desired even several times a week. Further, in the case of...

Detailed Description  
... will be described  
below.

17

In contrast to the prior art method of conducting an **auction**, the method and ...a partially computerized mode of operation and comprises interaction between a seller 10, a multi- **auction** service 30, a plurality of remote **auction** services 12, 14 and a plurality of bidders 20, 22. The multi- **auction** service 30 can be representative of an agent for the seller that acts on behalf of the seller to coordinate placement of the seller's item at a plurality of **auction** locations. The plurality of remote **auction** services 12, 14 can be representative of peer agents or **auction** houses, that may include local **auction** locations or internationally known **auction** facilities, that can accept items for **auction** and may additionally involve people that relay bids received on the items **auctioned**, back to the multi- **auction** service. In this manner, the multi- **auction** service 30 can have an item listed in paper-based catalogs where the catalog for a particular **auction** location contains descriptive information about the item to be sold. Prior to the actual **auction**, a slide image or other representation of the item may be located at each **auction** house. When the **auction** takes place, the multi **auction** service and remote **auction** service employees involved in the **auction** process relay the bids between participating **auction** services and the multi- **auction** service such that the bid is reflected at each **auction** location. Sotheby's and Christies for example, provide a catalog for viewing an item in advance of an **auction** to allow participants to **preview** the **items** to be sold. If both of these companies participated in the method of the present...  
...a telephone-based bidding process in addition to receiving bids from the patrons at their **auction** locations.

Bidders may be contacted when the auction begins via telephone or any other interactive...

#### Detailed Description

... selection of the "approve" button 316  
shown in Figure 12C.

Figure 12E illustrates an exemplary " **preview item** " interface 322 that may be presented responsive to user-selection of the "preview" button 310 of the interface 300 shown in Figure 12B. The " **preview item** "

interface 322 presents to the subn-dtting user a view of how the transaction description will actually be presented when a transaction process (e.g., an **auction** process) is commenced based on the transaction

description 84. The " **preview item** " interface 322 is useful to provide the

submitting user a final view of information that will be presented to a potential buyer accessing the network-based **auction** facility 10.

Detailed Description

Claims

Detailed Description

... invention; Figure 4 is a flow chart illustrating a current high bid calculation in a **vehicle auction** transitioning from a **preview** state to an active state according to one embodiment of the invention; and Figure 5 is a flow chart illustrating a current high bid calculation in an active vehicle **auction** according to one embodiment of the invention.

Detailed Description

In one embodiment, an online product...1999, and which is hereby incorporated by reference in its entirety. Upon transitioning into the **preview** state, the **vehicle auction** advantageously remains in the **preview** state for six (6) twenty-four (24) hour periods. The **auction** center 106 is advantageously configured to not accept seller modifications to the product data or the seller parameters associated with a vehicle **auction** that is beyond the review state. Moreover, the seller may advantageously not be permitted to remove a vehicle **auction** that is beyond the review state from the online product **auction** system 104. In another embodiment, the **auction** center 106 may permit the seller to modify seller parameters in order to request seller proxies even if the vehicle **auction** is beyond the review state.

The auction center 106 makes certain information associated with a **vehicle auction** in a **preview** state available to potential bidders. As an example, the **auction** center 106 may advantageously make available vehicle identifying information and a start minimum bid to enable a potential bidder to decide whether to submit a bid in the vehicle **auction**.

In one embodiment, the bids accepted by the auction center 106 for a **vehicle auction** in a **preview** state can be treated as secret bids. A secret bid can also be referred to...

...a potential bidder does not have access to previous bid information for the -1 5vehicle **auction** in a preview state. In another embodiment, a

Detailed Description

... invention; Figure 4 is a flow chart illustrating a current high bid

Search Performed by Sylvia Keys 27-Apr-04

calculation in a **vehicle auction** transitioning from a **preview** state to an active state according to one embodiment of the invention; and Figure 5...1999, and which is hereby incorporated by reference in its entirety. Upon transitioning into the **preview** state, the **vehicle auction** advantageously remains in the **preview** state for six (6) twenty-four (24) hour periods. The auction center 106 is advantageously ...

...is beyond the review state.

The auction center 106 makes certain information associated with a **vehicle auction** in a **preview** state available to potential bidders. As an example, the auction center 106 may advantageously make...

...vehicle auction.

In one embodiment, the bids accepted by the auction center 106 for a **vehicle auction** in a **preview** state can be treated as secret bids. A secret bid can also be referred to...

...Those of ordinary skill in the art will realize that the period of time a **vehicle auction** remains in the **preview** state is arbitrary, and the period of time may be any period of time sufficiently...  
...center 106 may permit the seller to specify a preview duration time, the time a **vehicle auction** is to remain in a **preview** state before becoming active.

I 0 At a step 306, the auction center 1 06 transitions the state of a **vehicle auction** from a **preview** state to an active state. In one embodiment, a vehicle auction transitions to an active...

...the termination of the sixth (6 th) twenty-four (24) hour period in which a **vehicle auction** was in a **preview** state. The **vehicle auction** advantageously remains in the active state for a twenty-four (24) hour period. In another...

...active state. The current high bid is determined from the secrets bids received while the **vehicle auction** was in the **preview** state. If no secret bids were received, the current high bid is set to zero...the vehicle auction from the previous review state to a preview state. While in the **preview** state, the **vehicle auction** becomes public.

Potential bidders are provided product information regarding the Pinto along with the seller...

...seller of the Pinto is requesting that the bidding be started at \$500.

While the **vehicle auction** is in a **preview** state, the seller is advantageously not permitted to modify any seller parameters.

In another embodiment...

...not previously request seller proxies may advantageously be permitted to request seller proxies while the **vehicle auction** is in the **preview** state by specifying a decrement amount and a low minimum bid.

Potential bidders are advantageously permitted to bid an the **vehicle auction** while it is in the **preview** state. At 10:00 A.M. Irvine time on April 2, 1999, a first bidder...

...1 06 is advantageously configured to generate proxy bids in increments

of \$50 for the **vehicle** auction. The bids submitted in a **vehicle** auction in a **preview** state are treated by the **auction** center 106 as secret bids and thus, is not made known to other potential bidders...

...on April 8, 1999, Irvine time, the auction center 106 transitions the state of the **vehicle** auction from the previous **preview** state to an active state. Substantially at this time, the auction center 106 determines a...

...vehicle auction. The current high bid is determined from the secret bids received while the **vehicle** auction was in the **preview** state. The current high bid for the Pinto auction will belong to the second bidder ...is a flow chart generally illustrating a calculation of a current high bid in a **vehicle** auction transitioning from a **preview** state to an active state according to one embodiment of the invention. This calculation of...

...larger than the proxy ceiling. The proxy ceiling was previously determined, at the time the **vehicle** auction transitioned from the **preview** state to the active state (refer to the discussion above for Figure 4), to be...vehicle auction notification request in a vehicle auction notification database. In one embodiment, whenever a **vehicle** auction transitions to a **preview** state, the **auction** center 106 can search the database to determine if any notifications need to be performed...

WANT SURPLUS ITEMS?

Surplus Defense Department goods are **auctioned** off in public sales at 150 different Defense Reutilization and Marketing (DRM) offices worldwide. Typically, bidders have **limited time** in which to prepare for **auctions**. Catalogues are available from DRM offices a month ahead of time. But often the quality of goods cannot be independently verified off-site prior to the **auction**. Sometimes, though, bidders can **preview** the **items** several days in advance. In some cases, bidders find it useful to enlist an agent; agents can represent clients at **auctions** or preview goods.

Two other things to bear in mind: Bidders must register with the...

...ABSTRACT to public online, and concluding a deal fast by putting up the article to an **auction** after showing it for a predetermined period is provided. The online trading system of the...

...stores submission for sale of an article and information of the article and selects an **auction** at which the article is to be **auctioned** . On the other hand, the on-line trading system shows the information of the article...

...predetermined period or until a predetermined date and time, puts up the article to the **auction** selected in advance. According to the present invention, a deal can be concluded fast by...

...article to public online to extensively invite purchasers and putting up the article to an **auction** after a predetermined period (Fig. 1)

...SPECIFICATION to public online, and concluding a deal fast by putting up an article to an **auction** after showing the article to public for a predetermined period.

## 2. Description of the Related Art

In a conventional **auction** for used automobiles (used cars) and the like, it is a common practice for a participant at the **auction** (a seller) to bring a used car to a predetermined **auction** site by transportation means such as a land transportation, and to put up the used car for **auction** there. For example, in the Japanese Patent Application Laid-open No. Hei 11-328271, an **auction** system is proposed in which purchasers can participate in an **auction** without actually visiting an **auction** site by providing the purchasers with information on an object (a used car) via communication...

...open to public and like other information online to order the car.

According to the **auction** system described in the Japanese Patent Application Laid-open No. Hei 11-328271, purchasers can participate in an

**auction** from a remote location. However, since the **auction** is held on a real time basis, the purchasers may not be able to participate in the **auction** if the schedule of the **auction** does not suit them.

In addition, in a case of an online trade for showing...

...bid be made in a short time.

In addition, even in a case of an **auction** for trades between individuals, if it takes long time until a successful bid is made...

...to public online, and concluding a deal fast by putting up the article to an **auction** after showing the article for a predetermined period.

The online trading system according to the...

...inputting information of the article;

information storing means for storing the information of the article;

**auction** selecting means for selecting an **auction** at which the article is to be **auctioned** ;

information showing means for showing the information of the article to public via communicating means;

purchase receiving means for receiving an application for purchase of the article; and

**auction** instruction information outputting means for instructing a seller to put up the article to the **auction** selected by the **auction** selecting means if no purchase application is received within a predetermined period or until a...

...if there is no purchaser during a predetermined period, putting up the article to an **auction** .

(2) An online trading system characterized by comprising:

sale receiving means for receiving submission for...

...communicating means;

purchase receiving means for receiving an application for purchase of the article; and

**auction** selecting means for selecting an **auction** at which the article is to be **auctioned** if no purchase application is received within a predetermined period or until a predetermined date...

...inputting information of the article;

information storing means for storing the information of the article;

**auction** selecting means for selecting an **auction** at which the article is to be **auctioned** ;

information showing means for showing the information of the article to public via communicating means...

...communicating means;

bid submission receiving means for receiving bid submission to the article at the **auction** ; and

successful bid determining means for determining a successful bid based on the information received...in which purchasers are allowed to bid whenever it suits them, and by holding an **auction** after the lapse of a predetermined period.

(4) An online trading system according to the...

...to trade at a reasonable price as in the case of participating in an actual **auction** even if the bidder has made a successful bid by presenting an excessively high bid...

...of bidding up; and

starting price storing means for storing a starting price of the **auction** , characterized in that if there is no bid submission at the **auction** but a bid submission is received via the communicating means, the successful bid determining means...

...to trade at a reasonable price as in the case of participating in an actual **auction** even if the bidder has made a successful bid by presenting an excessively high bid...

...to public for a predetermined number of days and hours before the date of the **auction** at which the article is to be **auctioned** .  
This configuration increases a business opportunity by showing the information of the article to public...

...of the article to public on a predetermined day weeks before the date of the **auction** at which the article is to be **auctioned** .  
This configuration increases a business opportunity by showing the information of the article to public...

...by uniquely defining the date for showing the information based on the date of the **auction** .  
(9) An online trading system according to any one of the above (1) through (8)...

...enables a deal to be concluded fast by putting up a used car to an **auction** while increasing a business opportunity by extensively inviting purchasers in used car trading that tends...

...of a purchaser who applies for purchase to the system, and reference symbol 5 denotes **auction** sites where **auctions** are held on a real time basis.  
The server 1 is provided with: sale receiving...

...seller terminal 3; information inputting means 1b for inputting information of the article (car information); **auction** selecting means 1c for selecting an **auction** at which the used car is to be **auctioned** among **auctions** to be held in the **auction** sites 5 ; information showing means 1d for showing the car information to public via the receiving means 1e for receiving an application for purchase of the used car; **auction** instruction information outputting means 1f for instructing a seller to put up the used car to the **auction** selected by the **auction** selecting means 1c if no application for purchase is received within a predetermined period or...

...public, a starting price (minimum opening bid) when the article is put up to the **auction** , a selling point, a photo, a safety check information and the like. The sale receiving...

...system by mailing a predetermined document to the management company.  
Upon submission for sale, the **auction** selecting means 1c notifies the seller terminal 3 of information of **auctions** at which the seller's car can be **auctioned** and displays the information on the screen of the terminal 3, and makes the seller select an **auction** at which the car is to be **auctioned** . The result of the selection is stored in the information storing means 1g. This storing...

...piece of car information. Further, if the seller knows in advance about information on an **auction** to be held, **auction** names and the like are notified to the server 1 together with the car information and are read by the **auction** selecting means 1c to be stored in the information storing means 1a, thus the **auction** information needs not be notified to sellers every time submission for sale is made.  
In...

...Alternatively, the opening date may be determined by counting backward from the date of the **auction** at which the car is to be **auctioned**. For example, the showing period may be Monday through Friday in the previous week of the **auction**.

<Application for purchase>

On the other hand, the server 1 provides retrieval service...

...for sale and application for purchase are thus received at any time. In addition, the **auction** instruction information outputting means 1f checks the car database everyday, and if there is a...

...for showing to public, the record of the car is moved to a to-be-**auctioned** database. Also, the **auction** instruction information outputting means 1f outputs instruction information for instructing the seller to put up the car to an **auction** by an e-mail, a facsimile or the like to the seller, and at the same time, transmits the car information to the corresponding one of the **auction** sites 5 such that the car is **auctioned** at the **auction** selected at the time of registration.

In this way, according to ...and, after the lapse of the predetermined period, the article is put up to an **auction**, so that the article can be sold fast. Therefore, circulation of cars is facilitated, and...

...period with desired conditions (desired price) of the seller being presented, and exhibiting at an **auction** after the lapse of the period.

Further, although an **auction** at which the car is to be **auctioned** is determined when the car information is inputted, and the **auction** instruction information outputting means 1f instructs the seller to put up the car to the **auction** on the closing date for showing the car to public, the system according to the...

...to public, specifies his or her car by the car management number, and selects an **auction** by the **auction** selecting means 1c.

<Second Embodiment>

Fig. 3 is a schematic diagram illustrating a...

...invention. In this embodiment, a system is provided in which prior bid is made, an **auction** is held after the lapse of a predetermined period, the price at the prior bid and the price at the **auction** are compared, and a higher price of the two is determined as the successful bid...

...and is provided with: the sale receiving means 1a; the information inputting means 1b; and **auction** selecting means 1c' for making a seller to select an **auction** at which an article is to be **auctioned** and notifying an organizer of the **auction** that the car is to be put up to the **auction**. In addition, the server 1' is also provided with: information showing means 1d' that shows to public car information and that the car is to be put up to the **auction**; prior bid receiving means 1h for receiving a prior bid for the car shown by...

...car information, a prior bid price and the like.

Management apparatuses (computers) for conducting an **auction** based on the car information notified from the **auction** selecting means 1c' of the server 1 are respectively provided in the **auction** sites 5. Each of the management apparatuses is provided with: **auction** information disclosing means 5a for disclosing a date when the **auction** is held and the like to the server 1; displaying means 5b for displaying car...

...price at the prior bid with the bid submission marking the highest price at the **auction**, and determining that the car is sold to a higher bid of

the two.

The...

...a name of a seller.

Upon submission for sale of the article, based on the **auction** information from the **auction** information showing means 5a of each of the **auction** sites 5, the **auction** selecting means 1c causes the seller terminal to display a name, a site, a date, a number of times and the like of **auctions** at which the article can be **auctioned**, and makes the seller to select an **auction** at which the article should be **auctioned**. Then, the **auction** selecting means 1c notifies that the article is to be put up to the **auction** and transmits the car information and information on the seller to one of the **auction** sites 5 where the selected **auction** is held or a an organizer of the **auction**.

In addition, upon submission for sale of article, an opening date and a closing date...

...Alternatively, the opening date may be determined by counting backward from the date of the **auction** at which the car is to be **auctioned**. For example, the showing period may be Monday through Friday in the previous week of the **auction**. In this embodiment, the car is shown to public from the registration date through the day before the **auction**.

<Application for purchase>

On the other hand, the server 1 provides retrieval service...form written in HTML. Also shown in the screen form then is data of the **auction** at which the car is to be **auctioned** after the lapse of the period for showing the article to public.

When wishing to...

...the highest price is specified and notified to the successful bid determining means 5d.

< Auction >

The management apparatus in the selected one of the **auction** sites 5 displays the car information notified by the **auction** selecting means 1c' on displaying means (a site display, etc.) 5b, and an **auction** is conducted with the **auction** starting price as an initial value.

Each time the price is bid up, bid submission...

...by the bid submission receiving means 5c of the management apparatus, and the highest price ( **auction** price) is updated and displayed on the site display 5b.

Then, when the **auction** is completed, the successful bid determining means 5d determines the bidder presenting the higher price as a successful bidder by comparing the **auction** price and the prior bid price notified by the server 1. If the **auction** price is higher than the prior bid price, the successful bid determining means 5d determines that the successful bid is to be made in the **auction** site, and notifies the prior bidder that the prior bidder fails to be a successful bidder.

In addition, if the prior bid price is higher than the **auction** price, a successful bid price is determined by a predetermined rule. For example, the prior...

...the successful bid price, or an amount calculated by adding a unit price to the **auction** price may be the successful bid price by providing unit price storing means for storing...

...bidding up. Further, if no bid submission is received in the selected one of the **auction** sites 5 and there is a prior bid, the successful bid price may be determined by adding the unit price to an **auction** starting

price by providing the unit price storing means and starting price storing means (in this example, the information storing means 1g') for storing the starting price of the **auction** .

The highest price of the prior bid and the successful bid price may be displayed...

...them, thereby extensively inviting purchasers by conducting, and the article is put up to an **auction** after the lapse of the predetermined period, so that the article can be sold fast at a reasonable price.

Further, the **auction** in this embodiment may be any form as long as it is a real time **auction** in which participants can participate substantially simultaneously, or may be the one in which participants can participate from remote locations as in the **auction** system described in the Japanese Patent Application Laid-open No. Hei 11-328271, or the one in which **auctions** are conducted only online.

In addition, although the bid submission receiving means 5c and the successful bid determining means 5d are provided in each **auction** site in this embodiment, these means may be provided in the server 1', and configured to receive bid submission from the **auction** sites 5 via the communicating means 2 and notify the **auction** sites 5 of a successful bid result also via the communicating means 2.

Moreover, although the starting price of the **auction** is fixed in advance in this embodiment, the present invention is not limited to this. The highest price of the prior bid may be the starting price of the **auction** . In this case, the successful bid determining means simply determines that, if a bid is made in the **auction** site, a successful bid is made in the **auction** site, and if no bid is made in the **auction** site, the prior bidder will be a successful bidder. In this case, identical means may...

...which a used car is described as an article to be put up to an **auction** , the present invention is not limited to this. An article may be any thing that...

...Wide Web) , and trades with the seller terminal 3, the purchaser terminal 4 and the **auction** sites 5.

Further, the present invention is not limited to the contents of the above...

...CLAIMS information of the article;

information storing means (1g) for storing the information of the article;

**auction** selecting means (1c) for selecting an **auction** at which the article is to be **auctioned** ;

information showing means (1d) for showing the information of the article to public via communicating means;

purchase receiving means (1e) for receiving an application for purchase of the article; and

- ...ABSTRACT to public online, and concluding a deal fast by putting up the article to an **auction** after showing it for a predetermined period is provided. The online trading system of the...
- ...stores submission for sale of an article and information of the article and selects an **auction** at which the article is to be **auctioned** . On the other hand, the on-line trading system shows the information of the article...
- ...predetermined period or until a predetermined date and time, puts up the article to the **auction** selected in advance. According to the present invention, a deal can be concluded fast by...
- ...article to public online to extensively invite purchasers and putting up the article to an **auction** after a predetermined period (Fig. 1)
- ...SPECIFICATION to public online, and concluding a deal fast by putting up an article to an **auction** after showing the article to public for a predetermined period.

## 2. Description of the Related Art

In a conventional **auction** for used automobiles (used cars) and the like, it is a common practice for a participant at the **auction** (a seller) to bring a used car to a predetermined **auction** site by transportation means such as a land transportation, and to put up the used car for **auction** there. For example, in the Japanese Patent Application Laid-open No. Hei 11-328271, an **auction** system is proposed in which purchasers can participate in an **auction** without actually visiting an **auction** site by providing the purchasers with information on an object (a used car) via communication...

- ...open to public and like other information online to order the car.  
 According to the **auction** system described in the Japanese Patent Application Laid-open No. Hei 11-328271, purchasers can participate in an

**auction** from a remote location. However, since the **auction** is held on a real time basis, the purchasers may not be able to participate in the **auction** if the schedule of the **auction** does not suit them.

In addition, in a case of an online trade for showing...

...bid be made in a short time.

In addition, even in a case of an **auction** for trades between individuals, if it takes long time until a successful bid is made...

...to public online, and concluding a deal fast by putting up the article to an **auction** after showing the article for a predetermined period.

The online trading system according to the...

...inputting information of the article;

information storing means for storing the information of the article;

**auction** selecting means for selecting an **auction** at which the article is to be **auctioned** ;

information showing means for showing the information of the article to public via communicating means;

purchase receiving means for receiving an application for purchase of the article; and

**auction** instruction information outputting means for instructing a seller to put up the article to the **auction** selected by the **auction** selecting means if no purchase application is received within a predetermined period or until a...

...if there is no purchaser during a predetermined period, putting up the article to an **auction** .

(2) An online trading system characterized by comprising:

sale receiving means for receiving submission for...

...communicating means;

purchase receiving means for receiving an application for purchase of the article; and

**auction** selecting means for selecting an **auction** at which the article is to be **auctioned** if no purchase application is received within a predetermined period or until a predetermined date...

...inputting information of the article;

information storing means for storing the information of the article;

**auction** selecting means for selecting an **auction** at which the article is to be **auctioned** ;

information showing means for showing the information of the article to public via communicating means...

...communicating means;

bid submission receiving means for receiving bid submission to the article at the **auction** ; and

successful bid determining means for determining a successful bid based on the information received...in which purchasers are allowed to bid whenever it suits them, and by holding an **auction** after the lapse of a predetermined period.

(4) An online trading system according to the...

...to trade at a reasonable price as in the case of participating in an actual **auction** even if the bidder has made a successful bid by presenting an excessively high bid...

...of bidding up; and

starting price storing means for storing a starting price of the **auction** , characterized in that if there is no bid submission at the **auction** but a bid submission is received via the communicating means, the successful bid determining means...

...to trade at a reasonable price as in the case of participating in an actual **auction** even if the bidder has made a successful bid by presenting an excessively high bid...

...to public for a predetermined number of days and hours before the date of the **auction** at which the article is to be **auctioned** .  
This configuration increases a business opportunity by showing the information of the article to public...

...of the article to public on a predetermined day weeks before the date of the **auction** at which the article is to be **auctioned** .  
This configuration increases a business opportunity by showing the information of the article to public...

...by uniquely defining the date for showing the information based on the date of the **auction** .  
(9) An online trading system according to any one of the above (1) through (8)...

...enables a deal to be concluded fast by putting up a used car to an **auction** while increasing a business opportunity by extensively inviting purchasers in used car trading that tends...

...of a purchaser who applies for purchase to the system, and reference symbol 5 denotes **auction** sites where **auctions** are held on a real time basis.  
The server 1 is provided with: sale receiving...

...seller terminal 3; information inputting means 1b for inputting information of the article (car information); **auction** selecting means 1c for selecting an **auction** at which the used car is to be **auctioned** among **auctions** to be held in the **auction** sites 5 ; information showing means 1d for showing the car information to public via the receiving means 1e for receiving an application for purchase of the used car; **auction** instruction information outputting means 1f for instructing a seller to put up the used car to the **auction** selected by the **auction** selecting means 1c if no application for purchase is received within a predetermined period or...

...public, a starting price (minimum opening bid) when the article is put up to the **auction** , a selling point, a photo, a safety check information and the like. The sale receiving...

...system by mailing a predetermined document to the management company.  
Upon submission for sale, the **auction** selecting means 1c notifies the seller terminal 3 of information of **auctions** at which the seller's car can be **auctioned** and displays the information on the screen of the terminal 3, and makes the seller select an **auction** at which the car is to be **auctioned** . The result of the selection is stored in the information storing means 1g. This storing...

...piece of car information. Further, if the seller knows in advance about information on an **auction** to be held, **auction** names and the like are notified to the server 1 together with the car information and are read by the **auction** selecting means 1c to be stored in the information storing means 1a, thus the **auction** information needs not be notified to sellers every time submission for sale is made.  
In...

...Alternatively, the opening date may be determined by counting backward from the date of the **auction** at which the car is to be **auctioned**. For example, the showing period may be Monday through Friday in the previous week of the **auction**.

<Application for purchase>

On the other hand, the server 1 provides retrieval service...

...for sale and application for purchase are thus received at any time. In addition, the **auction** instruction information outputting means 1f checks the car database everyday, and if there is a...

...for showing to public, the record of the car is moved to a to-be-**auctioned** database. Also, the **auction** instruction information outputting means 1f outputs instruction information for instructing the seller to put up the car to an **auction** by an e-mail, a facsimile or the like to the seller, and at the same time, transmits the car information to the corresponding one of the **auction** sites 5 such that the car is **auctioned** at the **auction** selected at the time of registration.

In this way, according to ...and, after the lapse of the predetermined period, the article is put up to an **auction**, so that the article can be sold fast. Therefore, circulation of cars is facilitated, and...

...period with desired conditions (desired price) of the seller being presented, and exhibiting at an **auction** after the lapse of the period.

Further, although an **auction** at which the car is to be **auctioned** is determined when the car information is inputted, and the **auction** instruction information outputting means 1f instructs the seller to put up the car to the **auction** on the closing date for showing the car to public, the system according to the...

...to public, specifies his or her car by the car management number, and selects an **auction** by the **auction** selecting means 1c.

<Second Embodiment>

Fig. 3 is a schematic diagram illustrating a...

...invention. In this embodiment, a system is provided in which prior bid is made, an **auction** is held after the lapse of a predetermined period, the price at the prior bid and the price at the **auction** are compared, and a higher price of the two is determined as the successful bid...

...and is provided with: the sale receiving means 1a; the information inputting means 1b; and **auction** selecting means 1c' for making a seller to select an **auction** at which an article is to be **auctioned** and notifying an organizer of the **auction** that the car is to be put up to the **auction**. In addition, the server 1' is also provided with: information showing means 1d' that shows to public car information and that the car is to be put up to the **auction**; prior bid receiving means 1h for receiving a prior bid for the car shown by...

...car information, a prior bid price and the like.

Management apparatuses (computers) for conducting an **auction** based on the car information notified from the **auction** selecting means 1c' of the server 1 are respectively provided in the **auction** sites 5. Each of the management apparatuses is provided with: **auction** information disclosing means 5a for disclosing a date when the **auction** is held and the like to the server 1; displaying means 5b for displaying car...

...price at the prior bid with the bid submission marking the highest price at the **auction**, and determining that the car is sold to a higher bid of

the two.

The...

...a name of a seller.

Upon submission for sale of the article, based on the **auction** information from the **auction** information showing means 5a of each of the **auction** sites 5, the **auction** selecting means 1c causes the seller terminal to display a name, a site, a date, a number of times and the like of **auctions** at which the article can be **auctioned**, and makes the seller to select an **auction** at which the article should be **auctioned**. Then, the **auction** selecting means 1c notifies that the article is to be put up to the **auction** and transmits the car information and information on the seller to one of the **auction** sites 5 where the selected **auction** is held or a an organizer of the **auction**.

In addition, upon submission for sale of article, an opening date and a closing date...

...Alternatively, the opening date may be determined by counting backward from the date of the **auction** at which the car is to be **auctioned**. For example, the showing period may be Monday through Friday in the previous week of the **auction**. In this embodiment, the car is shown to public from the registration date through the day before the **auction**.

<Application for purchase>

On the other hand, the server 1 provides retrieval service...form written in HTML. Also shown in the screen form then is data of the **auction** at which the car is to be **auctioned** after the lapse of the period for showing the article to public.

When wishing to...

...the highest price is specified and notified to the successful bid determining means 5d.

< Auction >

The management apparatus in the selected one of the **auction** sites 5 displays the car information notified by the **auction** selecting means 1c' on displaying means (a site display, etc.) 5b, and an **auction** is conducted with the **auction** starting price as an initial value.

Each time the price is bid up, bid submission...

...by the bid submission receiving means 5c of the management apparatus, and the highest price ( **auction** price) is updated and displayed on the site display 5b.

Then, when the **auction** is completed, the successful bid determining means 5d determines the bidder presenting the higher price as a successful bidder by comparing the **auction** price and the prior bid price notified by the server 1. If the **auction** price is higher than the prior bid price, the successful bid determining means 5d determines that the successful bid is to be made in the **auction** site, and notifies the prior bidder that the prior bidder fails to be a successful bidder.

In addition, if the prior bid price is higher than the **auction** price, a successful bid price is determined by a predetermined rule. For example, the prior...

...the successful bid price, or an amount calculated by adding a unit price to the **auction** price may be the successful bid price by providing unit price storing means for storing...

...bidding up. Further, if no bid submission is received in the selected one of the **auction** sites 5 and there is a prior bid, the successful bid price may be determined by adding the unit price to an **auction** starting

price by providing the unit price storing means and starting price storing means (in this example, the information storing means 1g') for storing the starting price of the **auction** .

The highest price of the prior bid and the successful bid price may be displayed...

...them, thereby extensively inviting purchasers by conducting, and the article is put up to an **auction** after the lapse of the predetermined period, so that the article can be sold fast at a reasonable price.

Further, the **auction** in this embodiment may be any form as long as it is a real time **auction** in which participants can participate substantially simultaneously, or may be the one in which participants can participate from remote locations as in the **auction** system described in the Japanese Patent Application Laid-open No. Hei 11-328271, or the one in which **auctions** are conducted only online.

In addition, although the bid submission receiving means 5c and the successful bid determining means 5d are provided in each **auction** site in this embodiment, these means may be provided in the server 1', and configured to receive bid submission from the **auction** sites 5 via the communicating means 2 and notify the **auction** sites 5 of a successful bid result also via the communicating means 2.

Moreover, although the starting price of the **auction** is fixed in advance in this embodiment, the present invention is not limited to this. The highest price of the prior bid may be the starting price of the **auction** . In this case, the successful bid determining means simply determines that, if a bid is made in the **auction** site, a successful bid is made in the **auction** site, and if no bid is made in the **auction** site, the prior bidder will be a successful bidder. In this case, identical means may...

...which a used car is described as an article to be put up to an **auction** , the present invention is not limited to this. An article may be any thing that...

...Wide Web) , and trades with the seller terminal 3, the purchaser terminal 4 and the **auction** sites 5.

Further, the present invention is not limited to the contents of the above...

...CLAIMS information of the article;

information storing means (1g) for storing the information of the article;

**auction** selecting means (1c) for selecting an **auction** at which the article is to be **auctioned** ;

information showing means (1d) for showing the information of the article to public via communicating means;

purchase receiving means (1e) for receiving an application for purchase of the article; and

**auction** instruction information outputting means (1f) for instructing a seller to put up the article to the **auction** selected by said **auction** selecting means if no purchase application is received within a predetermined period or until a...

...means;

purchase receiving means (1e) for receiving an application for purchase of the article; and

**auction** selecting means (1c) for selecting an **auction** at which the article is to be **auctioned** if no purchase application is received within a predetermined period or until a predetermined date...
